STG - (A) United States patent
AB - A biological forceps device for the taking of tissue samples from
a body, comprising a flexible main coil attached at its distal end
to a pair of homologous cast jaws. The jaws have radially
arranged teeth on their distalmost end. The jaws are opened and
closed by attachment to a pair of pull wires which extend through
the main coil, into a handle at its proximal end. the handle has a
spool which slides about a central shaft attached to the main
coil. The spool is attached to the pull wires, so that movement of
the spool with respect to the central shaft, effectuates a force
on the proximal ends of the levered jaws, to open and close them,
appropriately.
